| Installation      | Recessed in matwell with aluminium angle frame or surface-laid with ramp frame   |

Description

EMS Colortread aluminium grid entrance matting is a primary matting system for specification in commercial applications where the removal of footborne dirt is essential. EMS products are manufactured for high traffic areas such as hotels, retail stores, shopping centres, schools, hospitals and airports to name a few.

The matting is bespoke made. Each front to back panel has a male and female edge which lock together. Any left to right size can be achieved by simply butting the panels together. No T-Bar is required. All EMS matting systems come with a 10 year guarantee and interchangeable infills and scraper bars.
